Abstract
The total grade for this Homework is 10. There are 8 problems. You will get 1 point for each problem correctly solved, or almost correctly solved. You will get 0.5 points if you attempt to solve the problem, but fail. In addition you get 2 points simply for handing in your problems, even if you did not attempt them all (1 is enough to get these 2 points). Please hand in solutions that are clear and easy to read. The Grader has more than 60 students to grade and cannot spend time trying to decipher messy solutions. He will automatically give you 0.5 points if he cannot understand what you wrote. (you can complain to me if you think the grading was unfair).

1 Chapter 1 Schroeder, problems: 8,10,16,20,21,23,31,34
